The kingdom of Elka leads the charge, using methods of violence and vice to expand its territory. Under the iron fist of ruthless rulers, life in the world of Tarnished has become exceedingly grim. The Elden, elves blessed with exceptional divine power, ruled the world until a day when it was taken over by dark god-like beings known as "infernals." The number of infernals has grown to an absurd level, as they have committed innumerable atrocities and corruptions. Struggling against these forces, the warrior warriors known as Elden lords rise up, wielding the "Elden Ring," an ancient artifact endowed with power of creation. In the world of Tarnished, the Elden Ring is a magical device that creates a place of peace and prosperity. However, as time passes, the power of the Elden Ring has fallen into the hands of the infernals, who have corrupted it to be their own tool of terror and control. The Elden Ring has not been used since long ago. Mankind and the elves have forgotten that they once had a divine power of their own, namely the Elden Ring. New Fantasy Action RPG based on the popular MMORPG Eden Ring

The unparalleled Elden Ring is finally here! Elder "The most mighty realm of all", said the Royal Philosopher Kanon, as he entered a castle of the Royal House in desperation. The world was caught in a storm, and his wife Altana was a prisoner of the powerful but dark elf, Kim-Al'Tan. Q: How to create new ArcGIS Javascript API items in ArcGIS Online Does anyone know how to create new javascript items in ArcGIS Online? I tried the examples mentioned in the class API, but I cannot get them to work when embedded in the web app. I can create new item objects, but then can't figure out how to add them to an existing SLD and fields. Thanks

A: I was unable to add items by using the JavaScript API and creating new entry of "browsersync" and "browser" for the ArcGIS Online web app, but you might be able to get success by trying the in-built Maps JS API. For instance, I was able to add a new item using the following piece of code:

```
var map; require([ "esri/map", "esri/views/MapView" ], function (Map, MapView) { map = new Map({ basemap: "topo", extent: [-6.38565478052188,-6.4036
