Tumour necrosis factor (TNF) appears to play a role in various acute and chronic inflammatory disease states. The therapy of TNF-associated diseases has been pioneered in several conditions, including rheumatoid arthritis. However, this cytokine has been shown to induce shock and tissue damage in a wide variety of animals. In vitro evidence strongly suggests that mononuclear phagocytes play a crucial role in the pathophysiology of TNF, and that this cytokine may have a double personality. In some conditions (e.g. endotoxemia) TNF appears to play an acute pro-inflammatory role and recent studies indicate that in addition, it may have an anti-inflammatory role in specific conditions. This paper discusses evidence for these dual roles and concludes that only a refined understanding of TNF action will permit the successful development of novel therapeutic strategies., and their appearance was very different than their fellow inmates. They were covered with sores, and their hair had been ripped out. The medical staff at Togus said that the 'rest of the world' couldn't imagine the conditions on a jail's inner tier. In August, 2006, Otero-Flores pleaded guilty to 15 counts of child abuse resulting in serious bodily injury and was sentenced to more than 50 years in prison.
