Topography Topographic map A topographic map is a map of the Earth that is used to represent the relief of the Earth's surface, usually in elevation. Topographic maps are created using a variety of means, such as from aerial photography, satellite imagery, terrestrial photogrammetry, and topographic surveying. They are used for a variety of purposes, ranging from land surveying and urban planning to recreational pursuits. The earliest topographic maps were the relief maps of the Holy Land created in the 13th century. These are maps that show the elevation of the surface of the Earth in relation to other such maps. Some of these ancient maps were not accurate, as they were made from a projection, and the outlines were traced by eye. Modern topographic maps are produced by using a variety of means, including aerial photography, satellite imagery, terrestrial photogrammetry, GPS surveying, and interpolation of the results of these. The areas covered by such maps are generally small: for example, the topographic map of the contiguous United States covers less than a square mile. Elevation Elevation is a term often used to describe the surface elevation of an area. It is often used to refer to the elevation of the surface of the Earth, as in the
